
VoxHire — Product Proposal

AI voice interviews that screen every candidate and hand you a scored, shareable report.

Interview everyone. Read the report, not 200 resumes.

Live product: <https://voxhire.heyagenthive.com> · Try the demo (no signup): "Explore the live demo"

1. The problem

Hiring teams drown in early-stage screening:

- A single role can attract **hundreds of applicants**; resumes are a poor signal and easy to inflate.
- **First-round phone screens don't scale** — they eat recruiter hours, happen in narrow time windows, and quality varies by who's on the call.
- Strong candidates **drop off** during slow, back-and-forth scheduling.
- After all that effort, feedback is **inconsistent and hard to share** across the hiring team.

The result: recruiters spend their most expensive hours on the *first* filter, and good candidates slip through while weak ones advance.

2. The solution — VoxHire

VoxHire runs the **first-round interview automatically** with an AI voice interviewer, then produces a **structured, scored report** on every candidate — so your team spends time only on the people worth meeting.

Candidates click a link and have a real, adaptive voice conversation about their experience and skills. The AI greets them, asks role-specific questions, follows up on their answers, and at the end VoxHire generates a recruiter-ready report with a hire recommendation.

No scheduling ping-pong. No recruiter on the call. Consistent evaluation for every candidate.

3. How it works

1. **Post a role & add candidates.** Create a job; upload resumes one at a time or in bulk. VoxHire parses each résumé, de-duplicates candidates, and extracts skills.
2. **Send the link.** Candidates take an AI voice interview in their browser, on their own time — configured per role (skills, difficulty, type, duration).
3. **Read & share the report.** Every interview produces a scored report. Share it with a hiring manager via a one-click public link — no login, no PDF wrangling.

(An optional AI phone/voice screening step can run before the interview — confirming availability, current/expected compensation, notice period, and intent — and auto-schedule the interview when the candidate is interested.)

4. What you get

AI voice interviews - Browser-based voice interview; the AI speaks first and adapts follow-ups to each answer. - Fully configurable per candidate: role/title, tech stack & focus skills, difficulty, interview type, and duration.

Automatic, structured reports - Per-skill ratings, communication / confidence / clarity scores, strengths & gaps. - A clear **hire recommendation** (Strong Hire / Hire / Consider / Reject). - **Resume-claim verification** — cross-checks what the candidate said against their résumé and flags each claim as verified, partial, or unsupported. - Full transcript and an interview timeline.

Shareable reports - One-click **public report link** (read-only, no login) to share with hiring managers; revocable any time. PII and transcript are kept private on shared links.

Screening (optional) - AI voice screening that captures availability, compensation, notice period, and intent — and can auto-schedule the interview.

Integrity & fairness - Every candidate gets the **same** structured interview and rubric. - Built-in proctoring (tab-switching, fullscreen, multiple-display, dev-tools and copy/paste checks) with a transparent flag summary on the report. Candidates are told the rules up front.

Resume intelligence - Single and bulk résumé parsing, skill extraction, duplicate detection, and job matching.

Recruiting analytics - A dashboard with real metrics: candidates, interviews completed, completion rate, hiring funnel, and recruiter-hours saved.

Built for teams - Multi-tenant with roles (org admin, recruiter); each organization's data is isolated.

5. Why VoxHire

	Manual phone screens	Generic "AI screening" tools	VoxHire
Scales to every applicant	✗	✓	✓
Real adaptive voice conversation	✓	partial	✓
Tailored to the role's actual stack	depends	✗ (generic)	✓
Structured, scored report	inconsistent	basic	✓ rich + recommendation
Verifies résumé claims	✗	✗	✓
One-click shareable report	✗	✗	✓
Integrity / proctoring	✗	partial	✓

The wedge: consistent, role-specific first-round interviews at scale — with a report that's good enough to *make a decision from*, and shareable enough to drive the whole team around it.

6. Who it's for

- **In-house talent / recruiting teams** hiring at volume (engineering, sales, support, ops).
- **Staffing & recruitment agencies** screening large candidate pools for clients.
- **High-growth startups** without a large recruiting org who still need rigorous, fair first rounds.

7. Try it

- **Live demo (no signup):** open the product → "Explore the live demo." A sample organization with jobs, candidates, and AI-scored reports.
- **Take a mock interview yourself:** the demo includes a self-serve interview test where you set your own name, role, and tech stack and talk to the AI.

8. Pricing (*placeholder — confirm*)

Plan	For	Interview volume
Starter	Small teams & pilots	Entry-level monthly quota
Growth	Scaling teams	Higher monthly quota
Scale / Enterprise	Agencies & large orgs	Custom / unlimited

Usage-based interview quotas. Talk to us for a plan that fits your hiring volume.

9. Traction & validation

Early usage metrics, pilot results, and customer references are available on request.

10. Roadmap

- **Now:** reliable end-to-end interview + screening + scored, shareable reports; demo live.
- **Next:** deeper analytics, ATS integrations, multi-language interviews, and a self-hosted voice option to reduce per-minute cost at scale.
